PVC Foam Sheet (Foamex)

PVC foam sheet (Foamex) is a lightweight, durable material that is an ideal option for direct printing and laminating. It is primarily used in high quality point of sale displays, signage and exhibition stands due to its smooth, flat surface. Foamex board has good chemical resistance, low water absorption and is suitable for interior and exterior applications. It also offers good insulation properties and is easy to cut, fabricate and bond, but has low impact strength. PAR Group supply Foamex boards in a range of sheet sizes, thicknesses, grades and colours. For more information please see our availability sections below or alternatively contact our sales office.

Applications

Information boards, interior and exterior shop signage, displays, protective packaging, decorative fixtures and wall cladding.

Key Features of Foamex

- Temperature: -10°C up to +55°C.
- Suitable for interior and exterior applications.
- Good chemical resistance.
- Low moisture absorption and non-toxic.
- Lightweight.

Availability

Foam Grade (Standard)

Foam Grade is a cost efficient, lightweight PVC foam sheet and is our standard grade. It has a lower density (g/cm³) than our 'Light Grade' option and is available to buy online at PAR Direct by clicking the link above.
